Biyografi

My primary field of research interest is the application of physicochemical processes (i.e., adsorption, chemical oxidation, separation) in drinking water. I have dedicated my research career to studying water quality, the occurrence of disinfection by-product (DBP) precursors in source water, and their control during water treatment. I am also interested in understanding the algal and human activities on the occurrence of micropollutants (e.g., MIB and Geosmin, pharmaceuticals, per- and polyfluoroalkyl substances [PFAS], microplastics, flame retardants, pesticides, etc.) and heavy metals in source waters and controlling them with different physicochemical applications. However, recent research showed that abrupt changes occur in the behavior of weather events (i.e., global warming, drought, and heatwaves). Also, industrial, and domestic waste or wastewater discharges increase across the globe. The case in this new atmospheric phenomena, catastrophic events (i.e., drought, hot weather, wildfires, flooding), and increased algal and anthropogenic activities in source waters require new approaches in terms of watershed management and water treatment. Thus, my research interest evolved on these new emerging topics and their potential effects on safe drinking water supply. In addition, I'm doing research on the production of activated carbon from the waste feedstock and the regeneration of exhausted GACs. Furthermore, I am also a member of the International Biochar Association, and doing research on the production of biochar, a pyrolysis product shown as one of the most important future technologies on sequestration of carbon and improving plant & crop growth, from biosolids and waste feedstock.

Eğitim Bilgileri

Doktora, Clemson University, College of Engineering, Environmental Engineering and Science, Amerika Birleşik Devletleri
2010 - 2016

Yüksek Lisans, Michigan State University, College of Engineering, Civil and Environmental Engineering, Amerika Birleşik Devletleri 2008 - 2010

Lisans, Sakarya Üniversitesi, Mühendislik Fakültesi, Çevre Mühendisliği Bölümü, Türkiye 2002 - 2005

Yaptığı Tezler

Doktora, N-nitrosodimethylamine in drinking water: Temporalformation potential patterns in source waters and treatability of precursors, Clemson University, Environmental Enginnering And Science, 2016
